III. 綜合測驗：15%

Dr. Jill Mason is an expert on the sleeping behavior of animals. In her book, *While They're Sleeping!*, she discusses all the weird but wonderful ways in which animals get their rest. The early chapters deal with how animals stay safe while they are asleep. Giraffes, who sleep only 1. to avoid predator attacks, are mentioned first. The unique sleeping position of sea otters is also discussed. This is followed by the 2. sleeping secrets of Alpine swifts and dolphins.

3. half of the book is mainly about how and why bears and other animals hibernate. It deals with how they are able to live without food for months, and where they sleep. Finally, Dr. Mason also explains how these creatures prepare to sleep for so long 4. All in all, the book is 5. the finest of its kind available. Pick up your copy today!

- (B) 1. (A) thirty minutes the day (B) thirty minutes a day
(C) thirty-minutes the day (D) thirty-minutes a day
- (A) 2. (A) amazing (B) amazed (C) amazingly (D) amazement

- (C) 3. (A) Other (B) Others (C) The other (D) The others
(D) 4. (A) at times (B) at all times (C) at once (D) at a time
(B) 5. (A) one (B) one of (C) one with (D) one that

IV. 句型練習：16%

(1-2 題以 S + V + wh- (+ S) + V...改寫句子)

1. When did Michael Jackson die?

Do you know when Michael Jackson died?

Some kids get hurt on the playground because their arms are too weak to hold on to the rails of the monkey bar.

VI. 閱讀測驗：9%

When it's cold outside, could you sleep for five or six months? This is what an animal does when it hibernates.

When it hibernates, an animal sleeps for a long period of time. Animals hibernate when there's not enough food around to eat, so they rest until there is more food again. This helps them to stay alive.

Many bats hibernate. They hibernate in the winter when there are not a lot of insects around to eat. Normally they like to go into quiet, dark places like caves or the attics of houses.

When bats hibernate, their body temperatures go down, and their heartbeats may go from 200 to 300 beats per minute to only about ten beats a minute. During hibernation, they do almost nothing but rest for up to six months! By the end of their hibernation cycle, bats have normally lost up to half their body weight.

For animals, one way to survive the long cold winter is to sleep right through it. Without a doubt, hibernation allows animals to save their energy when food is **scarce**.

- (D) 1. What is this article mainly about?
- (A) How animals sleep and find food during the cold winter.
 - (B) How hibernation changes animals' body temperature.
 - (C) Why bats like to sleep in caves or in the attics of houses.
 - (D) How sleeping through the winter helps animals stay alive.
- (A) 2. According to the article, which of the following statements is true?
- (A) Animals hibernate to save energy.
 - (B) When animals hibernate, they don't lose weight.
 - (C) Bats like to eat a lot of insects before they hibernate.
 - (D) When animals hibernate, their heartbeat usually becomes faster.
- (A) 3. Which is closest in meaning to the word "**scarce**" in the last paragraph?
- (A) Not enough.
 - (B) Hidden.
 - (C) Available.
 - (D) Scary.
